KOHLER® Electronic Fuel Injection – The new standard in twin-cylinder engine performance

KOHLER®

In keeping with our reputation for consistently offering technologically innovative products, we are proud to be the first engine manufacturer to implement electronic fuel injection (EFI) technology across a broad range of products and horsepower. EFI will be introduced as a standard feature on all Command PRO® and Aegis® twin-cylinder engines, adding to the already impressive list of benefits. EFI by Kohler – the new standard in twin-cylinder engine performance.

EFI Benefits

- E85 and Flex-Fuel friendly – Another KOHLER first, this fuel alternative will save you money and is friendlier on the environment.
- Increased fuel economy will result in payback within first season of use.
- Cleaner burning system delivers lower emission levels.
- Plug 'n' play features a single fuel line, similar wire connections as with carbureted engines and same footprint as existing Command PRO and Aegis twin-cylinder engines.
- Contributes to longer maintenance intervals and results in lower operating expense.
- Improved throttle response.
- Dependable starting in all weather conditions.
- Self-contained EFI system - also a Kohler first with fuel module, ECU and sensors - are all engine-mounted.
- Three year warranty.

KOHLER®

Relentless Power. Legendary Performance.
